## TH8002H Digital Terminal Wire Shrinkable Tuber

- TH8002H is a single-station version of TH8001-plus, but the size of the heat shrinkable tube which can be fed is thicker. The following requirements can be considered for this model:
- The length of the heat shrinkable tube can be over 75mm and the diameter over 25mm
- It meets the application range of TH8001-plus but the output is not as large and meets more limited budget requirements

### SPECIFICATIONS

|                     |                                                                                   |
|---------------------|-----------------------------------------------------------------------------------|
| Size/Weight         | 606W × 1000D × 630H (mm) , 50Kg                                                   |
| Control             | Trivers shrinking control computer with touchscreen                               |
| Tube Diameter       | 60mm max                                                                          |
| Tube Length         | 125mm, 195mm optional                                                             |
| Heater Size         | 170mm (standard), optional width up to 220mm, or custom made                      |
| Temperature Control | Max 550 ± 1°C                                                                     |
| Timer               | 0-999 ± 0.1S                                                                      |
| Networking          | Ethernet/RS485, fieldbus option to remotely handle order/process/status/operation |
| Power Supply        | 380VAC, 3-phase, 2kW, 6kW optional                                                |
| Options             | Custom heater & tooling, single station                                           |

### about us

Trivers Shanghai, established in 2007 by Trivers Australia, has a series of over 10 products in robotic production lines & wire harness assembly automation backed by patents. It is an authorized supplier to several Fortune 500 companies, is an executive member of the Shanghai Robot Alliance, and is a key member of government R&D
